

*Small scars.  
Big benefits.*

## HAVE YOU HEARD THE NEWS?

**St. Mary's surgical robot is lending a hand – actually four hands – to treat women with gynecologic disorders.**

St. Mary's Medical Center is now using the da Vinci S Surgical System for a variety of gynecologic procedures including hysterectomies, myomectomies (removal of uterine fibroids), complicated endometriosis procedures and surgical correction of severe pelvic prolapse. This less invasive approach to gynecologic surgery allows the surgeon enhanced visualization and precision, which leads to excellent outcomes.

Minimally invasive gynecologic surgery offers several benefits over traditional open surgery, including:

- Shorter hospital stays
- Less blood loss
- Less scarring
- Faster recovery
- Quicker return to normal activities

For a physician consult, call **865.545.MD4U**.
